

QATIP AWS Lab0

Labs Start Guide.

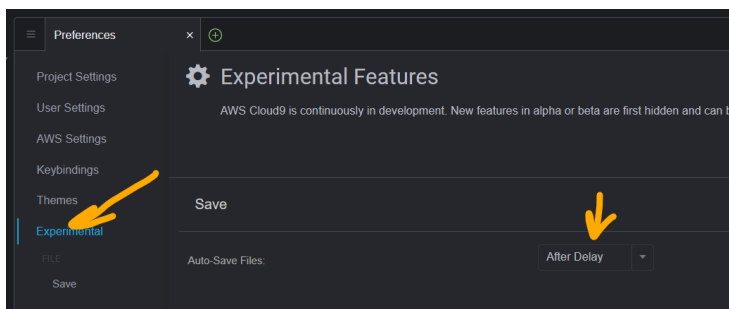

1. Access MyQA, navigate to the QATIP course offering and access the labs, selecting 'QA Terraform in Practice - AWS' (You may have to complete prerequisites before lab access becomes available)...

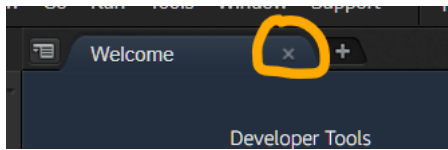

2. Click on **Start Lab / Restart Lab** and wait until 'ready' is displayed, this may take a minute or two and a progress bar will be displayed whilst the lab environment is initialize ...

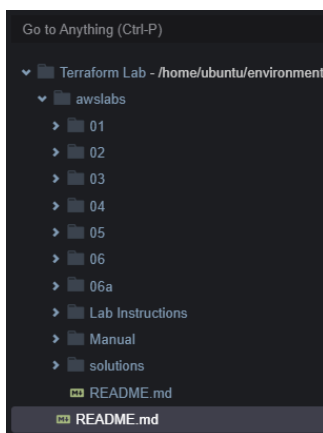

3. Complete Step 1 "Logging In to the Amazon Web Services Console" and Step 2 "QATIP Starting the Labs"
4. Whilst still in 'Preferences', turn on file Auto-Save...

5. In the IDE, close the Preferences and Welcome page tabs...

6. In your home directory on the left, there is a folder called **awslabs** with subfolders for your labs named 01, 02 etc. There are also solutions, course manual, and lab instructions folders. These can be viewed in the Explorer pane...

7. To install the Terraform client, enter the following command into the terminal...

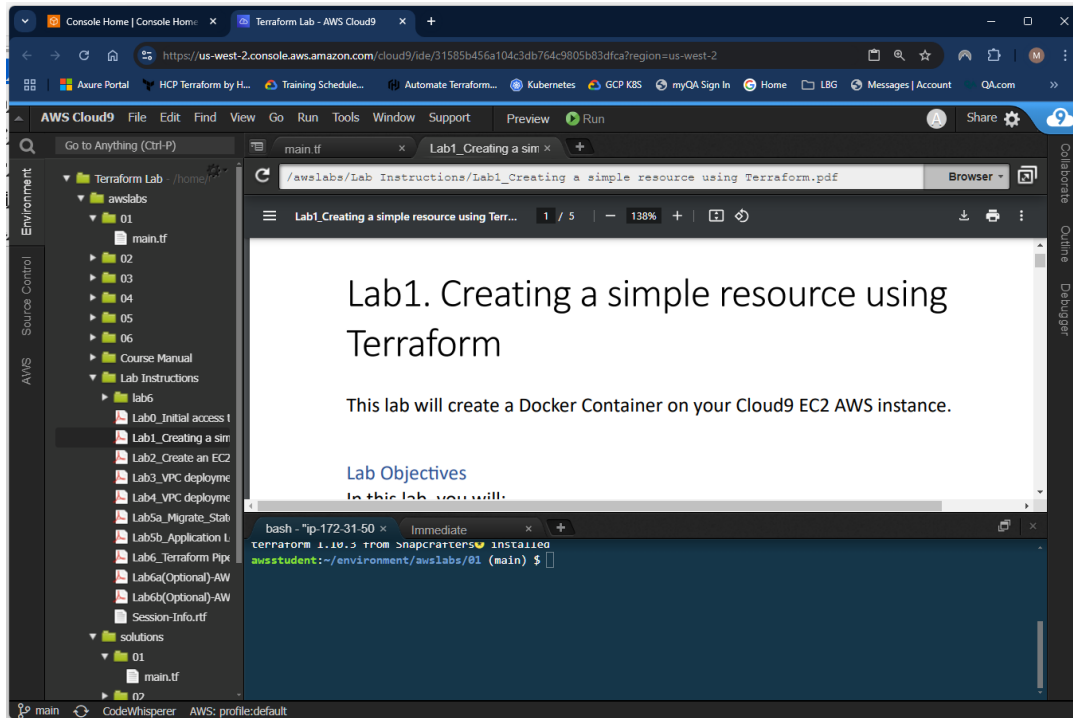

```
sudo snap install terraform --classic
```

8. To verify the installation, type the following command ...

```
terraform -version
```

9. Clear the content of the terminal pane by typing the word **clear** and pressing enter. Use this command throughout the labs to declutter the display, as necessary. When in the terminal, you can use your **up** and **down** keys to recall previous commands, if appropriate, rather than having to retype them. If you want to get to a clean prompt then simply press **ctrl+c** together to 'escape' rather than having to delete the current command. Practice these options now as they will be useful later.

10. Cloud9 supports displaying PDFs. When attempting a lab, you can open the instructions within the IDE. You can also copy and paste between the PDF and the IDE terminal. Therefore, you can run this entire course through a single browser session with two tabs, one focussed on the AWS console to view your resources and the other focused on the IDE, in which you can read and perform your labs...

**** This concludes the initial setup lab – Now proceed to the lab instructions for the lab you are attempting****
