Terraform in Practice (AWS) Lab0
Lab Setup - VSC

Lab Objectives

In this lab, you will:

- Launch and configure Visual Studio Code (VSC) in your lab virtual machine ahead of running subsequent labs
- Access AWS using provided credentials.

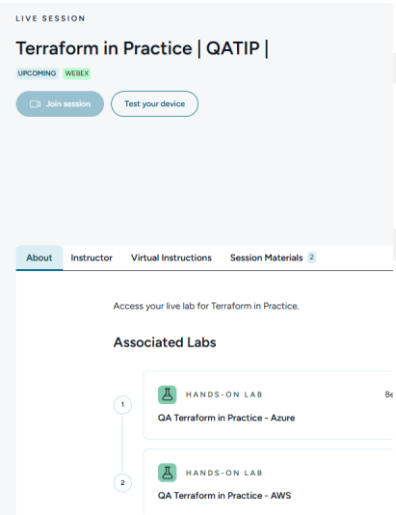

Teaching Points

This lab will configure your lab environment. The environment has a time limit of 8 hours after which it will be decommissioned. If the lab expires, ends or is restarted, you must repeat this lab before continuing.

Before you begin

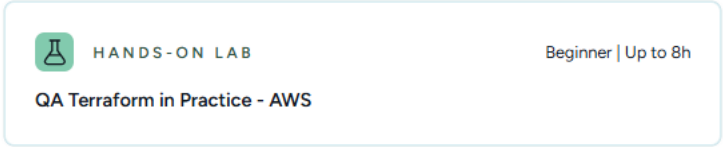

Access https://platform.qa.com and sign in.

Locate your scheduled live session…

Two lab booking should have been made for you, one for AWS based labs and another for Azure based labs. This document assumes that AWS is your preferred Cloud provider.

Select Hands on lab ‘QA Terraform in Practice - AWS..

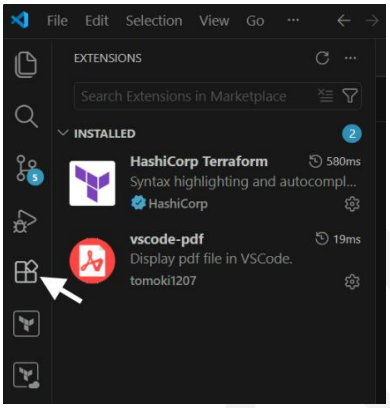

Click Start lab

A remote desktop will be provisioned for you.

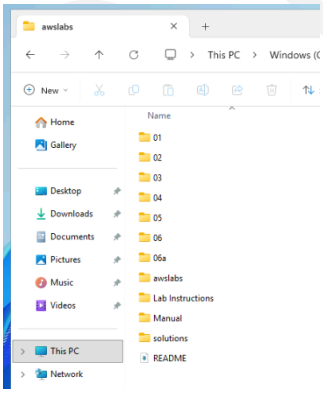

Task1 Set up your Lab environment

1. Open VSC  from the taskbar
2. Verify that the **Hashicorp Terraform** and **VSCode-pdf** VSC extensions are installed..

3. Use windows File Explorer to verify that there is a course folder **c:\awslabs** present on the remote vm c: drive…

4. If the folder is **NOT** present, then perform the following steps..

   Open a Powershell teminal (Right-click  , then select 'Terminal)

   Enter the following commands:

```
cd \
git clone https://github.com/qatip/awslabs.git
```

Close the Powershell terminal

5. Verify **c:\awslabs** has been added to **VSC Explorer;**

If the course folder is not present in **VSC Explorer,** then select '**Open Folder'** , navigate to, and select **c:\awslabs**

These class files are available at https://github.com/qatip/awslabs for local, post-class use.

Task 2 Logging into AWS

6. Open a new web browser (Chrome recommended) tab and login to the AWS Console using your provided lab credentials (yours will differ from those shown below).

   Note: This can be done from your local machine or on the remote desktop. The latter is recommended to avoid any possible local security restrictions.

   https://aws.amazon.com/console/

   - **Account ID or alias:** `146275973596`
   - **IAM user name:** `student`
   - **Password:** `_8014cz8M03VDY`

7. When required to run Terraform commands from VSC terminal, you will need to authenticate to AWS.
8. Type "**aws configure**" in a VSC terminal session (Terminal, New Terminal).
9. Use the AWS Access KEY ID and AWS Secret Access Key provided…

   4. If you require an Access Key and Secret for your lab, use the following:

   - **Access Key**: AKIAWJKSU[redacted]
   - **Secret** :
     yS7h1WT4aKwUC[redacted]H+Rvq0X2Wvy

10. Use "**us-west-2"** as your default region for this lab environment. If running these labs post-course then choose an appropriate region.

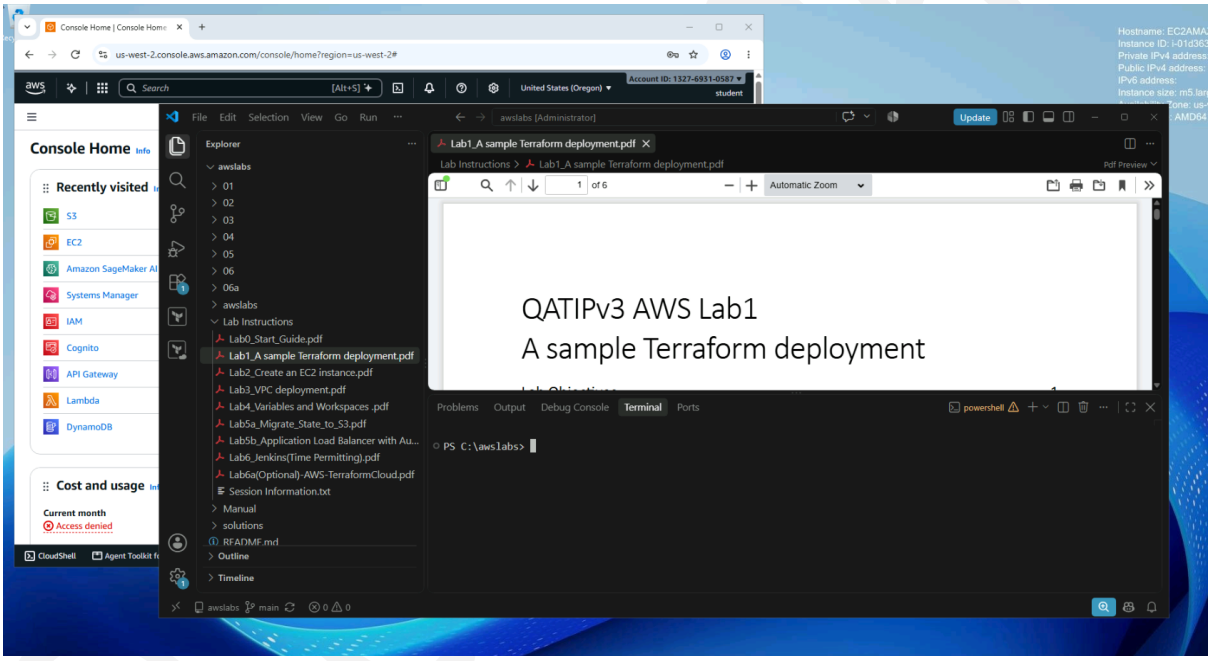

11. Leave Default output format blank.

12. These credentials are stored in **users/{username}/.aws**. You can re-run **aws configure** at any point to change these setting..

```
PS C:\qatfadvaws> aws configure
  AWS Access Key ID [****************CBE2]:
  AWS Secret Access Key [****************oqA+]:
  Default region name [us-west-2]:
  Default output format []:
```

Task 3 Arranging your remote desktop

13. In order to avoid the frustration of desktop clutter, it is suggested you arrange your desktop as shown below. In this way you can easily switch between your web browser, in which you can view your course manual, lab instructions, the AWS Console and any other web resources, and the VSC interface, in which you will create, and action terraform files.

You can view the lab instructions within VSC or through a browser, browsing to **c:\awslabs\Lab Instructions**.

Congratulations, you have completed this lab
